

Koji YONEKURA^a, Hiroyoshi OHASHI^b and Kazuaki OHASHI^c: **Identity of *Duchesnea indica* var. *albicarpa* Y. N. Lee (*Rosaceae*) from Korea**

シロミノヤブヘビイチゴの新異名 (米倉浩司^a, 大橋広好^b, 大橋一晶^c)

Summary: *Duchesnea indica* var. *albicarpa* Y. N. Lee is a synonym of *Potentilla indica* (Andrews) Th. Wolf f. *albocaput* (Naruh.) H. Ohashi.

Duchesnea indica var. *albicarpa* Y. N. Lee is described by Lee (2004) from Cheju-do Island, Korea with fine pictures of fruits. The variety is characterized by having white fruiting receptacles and achenes. It is, however, not a new taxon, but entirely identical with the taxon already known as *Potentilla indica* (Andrews) Th. Wolf f. *albocaput* (Naruh.) H. Ohashi (*Duchesnea indica* (Andrews) Focke f. *albocaput* Naruh.) described from Fukui Prefecture, Japan (Ohashi and Ohashi 2008).

We consider the plant should be treated as a form of the mother species, since it is distinguished from *Duchesnea indica* merely by its white fruiting receptacles. Hence the name is treated here at the rank of form as follows:

Potentilla indica (Andrews) Th. Wolf f. ***albocaput*** (Naruh.) H. Ohashi in J. Jpn. Bot. **83**: 60 (2008), "*albocaput*".

Duchesnea indica (Andrews) Focke var. *albicarpa* Y. N. Lee in Bull. Korea Pl. Res (4): 21, photo 14 (2004), **syn. nov.**

1992年に福井県からヤブヘビイチゴの品種として発表されたシロミノヤブヘビイチゴと同じものが、2004年に韓国済州島からヤブヘビイチゴの変種として記載された。これは品種とすべきものと考えられ、済州島産の変種の学名をシロミノヤブヘビイチゴの異名とする。
